JD EVOLUTION

SIMPLE INSERTION, NATURAL STABILITY

features

Anatomic coronal collar

Expanding tapered inner body

advantages

Reduces stress concentration on the crestal bone and maximizes bone volume around the implant neck for stable hard and soft tissue.

Self-cutting capacity in both directions

Favours gradual condensation of bone and guarantees high primary stability also in compromised bone situations

Apical cutting blades

Makes it possible to achieve high primary stability with low torque

They allow the implant to engage small osteotomies

SINGLE PROSTHETIC CONNECTION

features

- Single prosthetic connection for all diameters
- Dual system conical connection internal hexagonal
- Built-in platform switching
- Complete selection of temporary and final abutments for various heights and emergence profiles

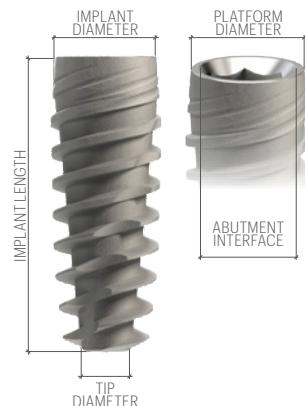

advantages

- Simplicity of clinical processes
- Reduces inventory and enhanced working flexibility
- Excellent connection stability
- Sealed connection: thanks to the connection design, there are no detectable microgaps at the implant-abutment in the area of the hexagonal connection
- High mechanical strength
- Greater hard and soft tissue stability
